Scoty Walls Sets

v. 1.2 - 11/2025

NEW in v. 1.2: Submenu (dependencies!)

This plugin offers Lots of "Walls on Slopes" in 6 sets of textures:
Sandstone, Granite, Brick, Concrete, Rubble and Retaining
(see attached illustrations)

Each set has around 35 pieces, it depends... of my mood. The textures adapt to the different shapes that the Terrain tiles can take. Lots are of several types:
- Straight – 1 to 3 variations **7**,
- Intermediate straight (without wall, parapet or fence),
- Stairs - (pedestrian Transit Enable) simple and double tile ramp from MAS71 **10**,
- Diagonal Top - 1 to 4 variations of the ground **1,12**,
- Diagonal Bottom - 1 to 4 var' + L|R ends of wall pieces **2,13**,
- Inner corner **4**,
- Outer corner (rare that one... isn't it!) - with L|R ends of wall **5**,
- Filler - to «close» a space or extend the parapet on the flat (or not) tiles **3,6,8,11**,
- Transition - joining two (textures) walls **9**,
- Underbridge - from the left/right for 3 terrain heights: 8, 15 and 22 m **14,15,16**.

I would like to mention here the contribution of **RSC204** which offered the small, but no less essential, Prop which made it possible to manufacture the «underbridges» quickly and easily. For your pleasure .. and mine!

Speaking of Bridge, the **Sandstone, Concrete and Retaining sets are «floodable»**, meaning that several pieces of this set can be placed on submerged Terrain tiles (Maxis water).

Speaking of water, diagonal pieces (for all sets) come with either a grassy/sidewalk half or «empty»!
That is to say that part of it is transparent and allows the Terrain to be seen. This implies, in a standard game situation, the appearance of the «water bug» after using the Pipes tool... Unless of course you use the solution proposed here:
Transparent Texture (Water Bug) Fix DLL
or .. Simtropolis <coris-partial-water-bug-fix> Topic ..
You have been warned ;-)!

Installation

Unzip the file to your Plugins\ directory.
The 6 Sets will be in Scoty\scoty Walls Sets\
If you do not wish to keep all 6 sets, take care to always keep:
MGB_UBprop_ScotyWalls.dat

Use

Scoty Walls sets appear in the Park\Embankment\ submenu.
(*without Submenu-DLL: in the "Energy - Electricity Grid" menu*).
The sets and their lots are presented (almost) in the same order as above.
Each Lot has an orange arrow indicating the top of it. For so-called "Filler" Lots, this arrow indicates the interior of the zone they define (as opposed to the parapet, barrier, etc.).

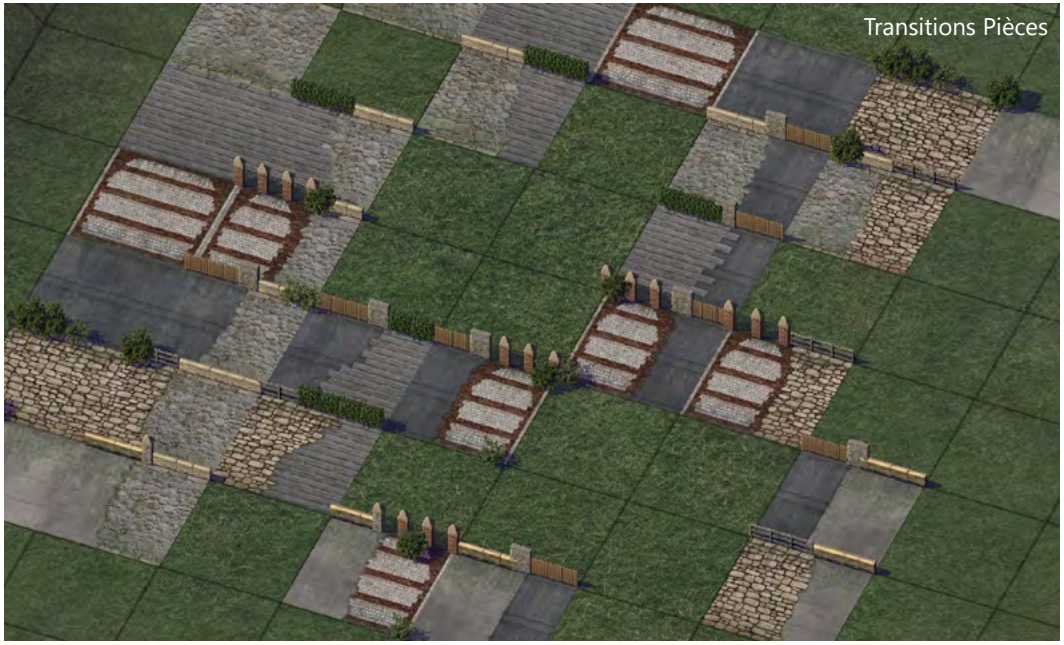

Like many textures of this type, the deformation beyond 12-15 m of elevation is quite strong, but the "Concrete" and "retaining" walls should support more stretching.

Yes, yes, I'm a big lazy guy and a bit teasing, and you will have to rack your brains to make certain connections between textures.

Dependencies

Japanese Walls Set
(only JPN_Walls_Props_One-Design_mas71.dat or JPN_Walls_Props_All-Design_mas71.dat)
Nams Props Pack Vol 2
BSC VIP Girafe Flora Pack .. (Daisy, Rowan, Feathers, Beeches, Bushes, Sparaxis)
BSC Common Dependencies Pack .. (Grfe hedge, BSC MEGA Props - CP Vol01)
SHK Parking Pack
NekoPropSet03
WMP Mega Props vol. 01 - Misc General Props
SPOT
v. 1.2 .. Submenus DLL ... and optionally Scoty Submenus & Icons Collection
